

1. (Currently amended) A flexible carry bag with fluid bladder comprising:

a kidney-shaped carry bag generally oval in longitudinal cross section formed from two complimentary panels secured about a portion of said panels peripheries, thereby defining an opening proximate one end thereof and a kidney-shaped cavity;

a ~~pre-filled~~, resilient disposable fluid bladder for containment of a fluid, generally oval in longitudinal cross section formed from two complimentary panels secured about said panels peripheries and defining an opening at one end thereof, said opening in said fluid bladder having a closure means formed thereon for the dispensing from said fluid bladder, said fluid bladder shape when filled being complimentary with said cavity of said carry bag, said fluid bladder having no shape when emptied;

a closure means secured to said carry bag for partial closure of said opening of said carry bag, said closure means secured to said carry bag permitting the insertion and removal of said fluid bladder, said closure means of said fluid bladder extending outwardly from said carry bag when said closure means of said carry bag is in a closed position.

2. Cancelled

3. (Previously presented) The flexible carry bag and fluid

bladder in accordance with Claim 1 wherein said closure means secured to said carry bag is a flap permanently secured to one of said panels of said carry bag and means for securing to said opposing panel.

4. (Originally presented) A flexible carry bag with fluid bladder in accordance with Claim 1 wherein said closure means of said carry bag is a zipper securing opposing panels of said carry bag.

5. Cancelled.

6. (Originally presented) The flexible carry bag with fluid bladder in accordance with Claim 1 wherein said closure means of said fluid bladder is a threaded closure.

7. Cancelled.

8. (Cancelled)
